# Company Profile

Founded in 1997 by Mark Clare, Clare Distribution Services has seen significant growth in recent years. We specialise in the distribution of temperature controlled products delivering (in Ireland) chilled, frozen and ambient produce. Our lines of expertise include conducting, coordinating and adhering to specific delivery instructions for point to point, multi-drop and next day deliveries for a range of dry, chilled and frozen products.

Affiliated with the Freight Transport Association of Ireland, we are now recognised as one of the leading temperature-controlled distributors in Ireland. We consider ourselves to be a complete solution provider – identifying needs, setting objectives, presenting solutions and exceeding expectations.

In recent years we have achieved the ISO 9001 Quality Standard and we are also BRC Compliant, confirming our ongoing commitment to the highest levels of customer service.

Over the years our fleet has grown considerably and now consists of Vans, Rigid, Artics and Fridge Trailers. We have taken our service to the next level by moving to dual temperature across the entire fleet. We have invested heavily in IT systems, Telematics and CCTV cameras enhancing and improving our day to day operations.

Some of our valued customers enjoy a dedicated fleet service and in late 2018 we were proud to introduce a “Shared User Model”. The SUM model allows CDS to service pallet distribution for both existing long term customers as well as adding new customers to our network.

## Our Specialities

Frozen

Chilled

Ambient

Pharmaceutical

## Nationwide Delivery

We deliver across all 32 counties in Ireland. Our Fleet is regularly serviced and always in top working order. This is our commitment to guaranteeing uptime so our deliveries are on-time, every time.

We have established ourselves as a leading temperature-controlled distributor in Ireland exceeding industry standards for reliability, performance, efficiency and cost effective deliveries.

We are confident that we have full contingency plans in place to deal with any emergency situations that may arise. Working in conjunction with our long term suppliers, our Fleet is covered by Gold Star Standard 24/7 Maintenance Contracts covering all contingency requirements.

## Temperature Control Expertise

We specialise in the distribution of temperature controlled products; frozen and chilled. Our full fleet now operates at dual temperature, so each vehicle is equipped to carry one or both types of product. This investment in our fleet ensures our consistent delivery of perishable cargo at optimum quality.

## Logistics Co-Ordination

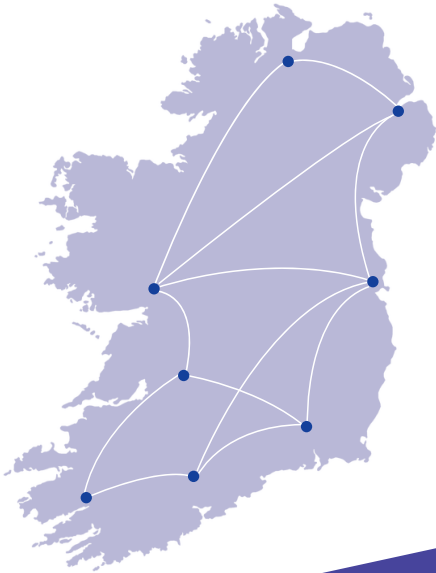

Our expertise includes conducting, co-ordinating and adhering to specific delivery instructions. On-time delivery is imperative and is something we monitor on a minute by minute basis using telematics systems.

This advanced technology allows online real-time tracking of the vehicle location, along with the temperature of the fridges and trailers. This has streamlined our operation allowing us to deliver efficiently and cost effectively on behalf of our customers.

In addition to our telematics systems we have also invested in CCTV cameras which enhance driver security and provide customers with additional peace of mind. Footage aids accident investigations should the need arise and also assists us to examine driver behaviour, which enables us to tailor specific training for their needs.

## Why Choose CDS?

- \* Top Class, unrivalled Distribution service
- \* Temperature Controlled Deliveries
- \* Strong Customer Focus
- \* Reliable, Pristine Fleet
